## Dermal Filler Treatment

### Before Treatment:

- Treatment is not safe for people with certain medical conditions – be sure that you have informed your surgeon about your medical history including any medication you are taking.
- Please ensure you have fully discussed the proposed treatment with your surgeon, signed your consent form and you are happy to proceed.
- You should not go ahead with treatment if you are pregnant or breastfeeding.
- If you are prone to cold sores it may be sensible to pre-treat with an antiviral tablet starting 3 days beforehand – please discuss this with your surgeon.
- If you have any further questions, please ask before the treatment is carried out.

### After Treatment:

- Redness, swelling, bruising and some tenderness after the treatment are common and usually resolve within 72 hours. A cold pack may help this.
- Do not rub, press or squeeze the area for 24 hours (take care with make-up application).
- Avoid facial beauty treatments, massage, strenuous exercise, alcohol, extreme heat or cold exposures for 24 hours post treatment.
- Avoid any laser treatment or microdermabrasion over areas with fillers for a minimum of one week after treatment.
- You will usually be asked to come back for a review appointment 2 – 3 weeks after treatment to ensure that you are happy with the results.

Please contact the clinic if you have any concerns at all.
